9. Remove and discard the original outer blend air door.
10. Mark and cut the inner web in the two places marked in Figure 5. Discard the inner web.

NOTE: There will not be any noticeable change in performance with air flow when the inner web is removed.

11. Remove and discard the original inner blend air door.
12. Trim and clean all edges on the inner web, new access cover and access hole opening.
13. With a shop vacuum cleaner; clean up all the debris from inside the HVAC housing after the cutting is complete.
